

Anita Bertisen, P.E.

Program Manager, Operational Technology & Business Improvement, Newmont Corporation and President of Women in Mining USA

Anita Bertisen is an active member of the international mining industry with over 17 years of international experience. She is a Professional Engineer in the state of Colorado and has a Master degree in Mining Engineering from the Colorado School of Mines and a Master in Applied Earth Science of the University of Technology in Delft, The Netherlands.

Anita has held a wide variety of positions in operations, engineering, business improvement, project management, asset management and business development. Anita currently works at Newmont Corporation as Program Manager of Operational Technology and Business Improvement. Previously at Newmont Anita was Principal Advisor in Asset Management and Chief of Staff for the COO. Anita has worked at Anglo Gold Ashanti's International Operations Business Improvement group, Tetra Tech's mining study group, URS' contract mining business unit, and Rio Tinto's Asset Utilization & Technology Group.

Anita currently serves as President of the National Women in Mining Organization in the USA, where she uses her passion for the mining industry to lead the way to "Change the face of Mining". Her key strengths are her leadership, language, and interpersonal skills and her ability to integrate and simplify complex, cross-functional projects into achievable solutions. Her experience is in the areas of mine and strategic planning, business development, optimizing asset utilization, labor optimization, work management, systems and process implementation and change management.
